

# Similarities and Differences College and Elementary students

**Story:** Beaver Joey has just started college. Now that he is in college, Beaver Joey, still studies every day, however his classes are in different building with different classmates. He remembers that in elementary school, his classes were mostly in the same building with the same friends. When he was in elementary school he lived at home with his family, but now that he is in college he lives in a dormitory. In elementary school, his mom woke him up for school, but now that he is in college, he has to wake up on his own to arrive at class on time. In elementary school, he learned that eating well was important, now that he is in college he knows that eating well means choosing fruits and vegetables when he goes to the cafeteria for lunch instead of eating candy. In elementary school, he remembers running around the school's playground for exercise, but from the college tour he just took Beaver Joey discovered that in college he has a football arena, soccer fields and gym to use for exercise. Although Beaver Joey has found many things different at college than in elementary school, he still sees some similarities. Can you help him name them?

**Directions:** Below are some statements that apply to different types of students. Next to each statement, write either the letter **C** for College Student, the letter **E** for elementary student, or the letter **B** for both.

	Lives in a dormitory with other students		Lives at home with family members or guardians
